

CBC HP

Flaker of frozen blocks **CBC HP** is a machine designed to cut frozen blocks of meat or other products at -20°C, by means of a rotating 4-blade roller, this produces pieces of irregular shapes and sizes depending on the type and temperature of the product.

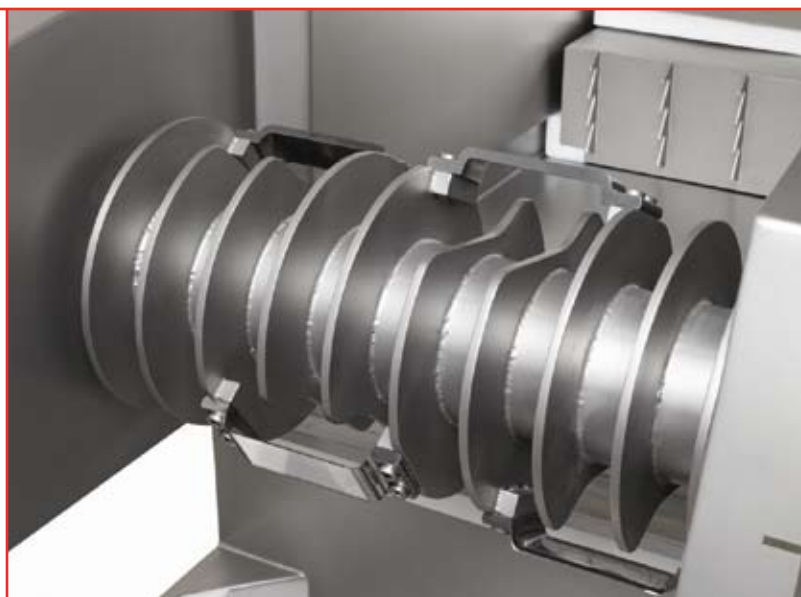

The small size of the portions obtained considerably facilitates the subsequent work of the cutting and mincing machines, thereby reducing the time and effort required by these machines.

The chopped product is unloaded into standard 200 litre trolleys, the trolleys are pneumatically attached to the machine.

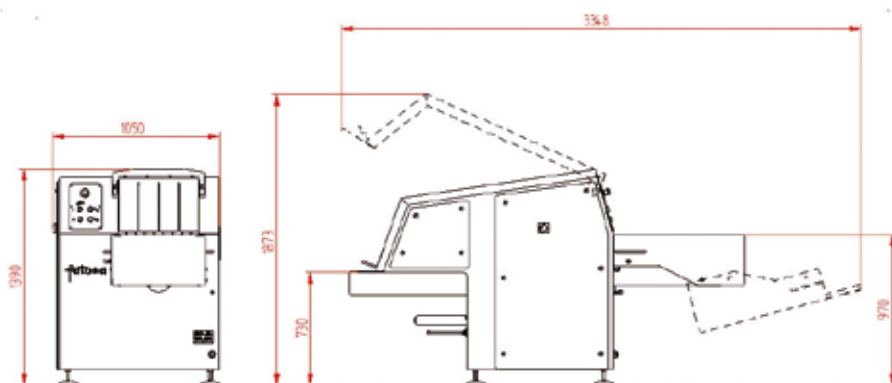

The **CBC HP** is designed to work with blocks with these maximum dimensions: 520x280x600 mm. The block is pushed by a pneumatic cylinder.

It can be supplied with two different thicknesses of cut. Moreover, the machine can be supplied, under request, with a closed drum and vertical knives.

Machine designed and manufactured in accordance with CE hygiene and safety standards.

CHARACTERISTICS

Type	CBC HP
Production	4000/6000 Kgs/hour
Bolck size	520x280x600
Minimum temperature	-20° C
Power	11 kw
Machine weight	960 Kgs
